Ending Hunger in America

Ending hunger in America is possible. It is not an impossible dream. If we decided we really wanted to do it, we could wake up one morning in 2030 and be living in a country where hunger is rare and temporary, not the shared experience of millions of Americans that it is in 2014.

The United States has accomplished more audacious feats than this in shorter periods of time. During the early years of the Great Depression, for instance, few expected that New Deal reforms would reverse what was at that time the worst period of income inequality in the nation’s history and lead to decades of more broadly shared prosperity.

The New Deal was a bold response by the U.S. government to fissures in the economy exposed by the Great Depression. We are still waiting for a commensurate government response to the fissures exposed by the Great Recession, which officially ended in 2009. Of course the United States is a much different place in 2014 than it was in 1934, but arguably, the return of income inequality on the scale we have today—and the high poverty rates that go with it—mean that the government needs to make another correction just as bold as the New Deal.

2030 is not an arbitrary date to wake up to an America without hunger. Although most of this report is about ending hunger in the United States, it also calls on the U.S. government to work within the international community to forge a unified and universal set of global development goals to follow the Millennium Development Goals (MDGs), whose deadline is December 2015. A post-MDG agreement should include a specific goal to end hunger and achieve food security and good nutrition in all countries by 2030. “MDG” may not be a household word in the United States, but the MDG experience is inspirational: setting goals led to concrete progress on global poverty.

“We cannot succeed against hunger while ignoring poverty, because hunger is a physical manifestation of poverty.”
In 2000, every country agreed to support the MDGs, which included cutting global hunger and poverty rates in half. The poverty goal has already been met, and we could achieve the hunger goal given a strong push in the time remaining before the MDGs expire. The United States and other developed countries contributed to the success of the goals as donors, but the MDGs did not call for donor nations to reduce hunger and poverty at home as it did for developing countries.

The post-MDG goals should be universal, calling on every country to effectively end hunger and poverty. The momentum and sense of purpose created by global progress against hunger and poverty could help to inspire hope for progress in the United States. The improvements made under the MDGs are significant enough to give us confidence that ending hunger by 2030 is an attainable goal. And Americans rarely back down from a challenge.

The 2014 Hunger Report, Ending Hunger in America, urges President Obama and Congress to lead the country in setting a goal to end hunger by 2030, and it offers a four-part plan to accomplish this: 1) a jobs agenda, 2) a stronger safety net, 3) human capital development, and 4) public-private partnerships to support innovative community-led initiatives against hunger. The report also calls on the U.S. government to support international efforts to end hunger and poverty worldwide.

A 25 Percent Reduction by 2017

The annual food security survey conducted by the U.S. Census Bureau is our measure of how much hunger the country is confronting. We will know we have ended hunger when all households are food secure. In 2012, the most recent year for which we have data, 14.5 percent of American households were considered food insecure. That’s the federal government’s term for being hungry or at risk of hunger.

We cannot succeed against hunger while ignoring poverty, because hunger is a physical manifestation of poverty. The food insecurity rate in the United States remains exceptionally

The average incomes of the top 1 percent of households rose by 19.6 percent in 2012, while the incomes of the other 99 percent grew by just 1 percent.\(^1\)

Nearly two-thirds of SNAP recipients are children, elderly, or disabled. Among SNAP households with children and at least one working-age, non-disabled adult: 62 percent work while receiving SNAP and 87 percent work in the prior or subsequent year.\(^2\)
high because the economic recovery from the Great Recession has been sluggish. When a household’s breadwinner is out of work or can’t find full-time work, everyone living under the same roof is put at risk of hunger. Child hunger is directly related to the poverty that results from parents being unemployed or underemployed. Food insecurity is more common among children than any other age group—affecting more than one in five children in our country.

Food is a basic need, as are shelter, transportation to and from work, care for children and elderly family members, and medical expenses such as prescription drugs and doctor’s visits. How much these cost are usually not negotiable. But food is one that can be negotiated on a daily basis, with oneself and/or one’s family members—by purchasing cheaper, less nutritious items, by cutting back on portion sizes, or by skipping meals altogether. This is how families in poverty cope: some members, generally the adults, endure spells of hunger. Parents live with the constant stress of food running out, of exhausting their wages and whatever assistance they can secure before the end of the month.

A strong recovery capped by a return to full employment would improve U.S. food security levels by 25 percent. The last time the economy was at full employment was in 2000, at which time the household food insecurity rate was 10.5 percent. That’s 28 percent lower than today’s 14.5 percent rate of food insecurity.

Full employment by 2017 is possible if the president and Congress can overcome budget brinksmanship and agree on investments to spur faster job growth. The Federal Reserve manages the country’s monetary policy; it has a dual mandate of controlling inflation and promoting full employment. Since the start of the Great Recession, the Fed has prioritized full employment. As a new chair of the Federal Reserve succeeds Ben Bernanke in January 2014, she will need to use her influence to maintain the Fed’s focus on full employment.

In 2012, the poverty rate for African American children was 37.5 percent, for Hispanic children 33 percent, and for non-Hispanic White children 12 percent.

While children make up roughly 24 percent of our total population, they comprise one third of the nation’s poor.
A 50 Percent Reduction by 2023

We can cut hunger and poverty in half in the United States within a decade. We know it is possible. All we need to do is look at how other countries have done it. It’s not only developed countries with living standards similar to those in the United States, such as those in Scandinavia or parts of Western Europe, which have reduced hunger within their borders. Countries in Africa, Asia, and Latin America have also done it.

Progress against poverty and hunger is more difficult in low-income countries because they have fewer resources. The infrastructure needed to make progress sustainable is often lacking. The fact that many countries have made progress despite all the obstacles is a testament to what is possible when political leaders make a bold public commitment and are willing to be held accountable for fulfilling it.

By itself, returning to full employment might make it possible to cut hunger in half within a decade. But economic downturns are all but inevitable. We all know people who have fallen on hard times—lost a job, suffered an illness, or seen their retirement savings disappear in a recession. And there are people who are not able to work—elderly people, people with disabilities, children. Bias and discrimination still keep people unemployed or underemployed. This is the world’s wealthiest country and most of us are compassionate, fair-minded people. We should support each other through life’s ups and downs. Sustainable reductions in hunger on the order of 50 percent or more will depend on strengthening the safety net and investing in human capital.

The Supplemental Nutrition Assistance Program (SNAP, formerly food stamps) is the nation’s flagship nutrition program and the main safety net preventing families from going hungry. Households that are food insecure spend 26 percent less on groceries, including with their SNAP benefits, than the typical food-secure household of the same size and composition.¹ The food safety net needs to become a nutrition safety net, one that offers not only assistance to prevent starvation, but the means to afford the nutritious foods people need to remain healthy.

The current minimum wage, $7.25 an hour, is far from enough to ensure food security for a family of four. A family of four with a full-time minimum-wage worker who is eligible for both the Earned Income Tax Credit and Child Tax Credit still has 13 percent less than a poverty-level income.² In this report, we propose raising the minimum wage to $12 an hour. Currently, about a third of all workers earn less than this.³ In 2014, $12 an hour is what it takes for a single breadwinner in a family of four, working full-time, year-round, to pull her or his family just over the federal poverty line.
In addition to fair wages, people need to be able to balance their work and family responsibilities. Forty percent of low-income parents have no access to any paid time off (no sick days or medical leave, no parental leave, no vacation), making it difficult to care for newborn or sick children. The younger their children the greater chance that a family will live in poverty. In the United States, children younger than 3 have the highest poverty rate of all children. The hardships associated with living in poverty during one’s earliest years have lasting consequences for health, education, and other “quality of life” determinants.

More than two-thirds of children living in poverty are in families that have at least one wage earner. Government has a role in setting workplace standards so that workers can fulfill their job and family commitments. One example of the support that is needed for work is child care. One of the main differences between U.S. society today and a half-century ago is the presence of large numbers of women in the paid workforce. But this major change is not reflected in our nation’s policies. The United States lags behind every other developed country in the world in recognizing the need for government to assist families in affording quality child care. And child care that includes an educational component has three payoffs: it strengthens the safety net for low-income working families, adds to the children’s human capital development, and builds a stronger future for America.

Ending Hunger by 2030

We can get closer to ending hunger than the United States has ever gotten by improving job quality, strengthening the safety net, and investing in human capital development. In order to make economic mobility a real possibility for children born to low-income families, human capital development needs to start with early education and go all the way through college. But to end hunger altogether, we must also confront knottier social issues, such as racism and other forms of discrimination that drive too many people to the margins of society.

Social exclusion is a problem in countries around the world as well as in the United States. Per capita incomes are on the rise in many nations, but not everyone is sharing the gains—particularly people at the very bottom, a group sometimes referred to as the ultra-poor. The United States has its own group of ultra-poor people, including more than a million households with children and with incomes below $2 a person a day.

Ending hunger in the United States will require leadership not only at the federal level but also at the state and local levels. There are countless examples of locally-led initiatives that are achieving great success in their communities. At their core, these initiatives are formed around the belief that to end hunger in a community, a broad range of stakeholders must unite behind a common vision and strategy.

A sense of community ownership is critical to finding sustainable solutions to hunger. Partnerships at the local level, and between local initiatives and state and federal government, build that ownership. Local partners do more than feed people; they feed information to leaders in government, and they make informed suggestions as to how partners can work together to fight hunger more effectively. Setting a national goal to end hunger would place independent local efforts within a wider framework. Connecting the many community-led anti-hunger efforts will enable them to develop a broadly shared narrative—the story of ending hunger in America.
OVERARCHING RECOMMENDATIONS

- The president should set a goal to end hunger in America and work with Congress to develop a plan to achieve the goal within 10-15 years.
- A plan to end hunger should include 1) a jobs agenda, 2) a stronger safety net, 3) human capital development, 4) public-private partnerships to support community initiatives, and 5) support for international efforts to end poverty and hunger worldwide.

GETTING TO FULL EMPLOYMENT

- The Federal Reserve Board should maintain its pro-jobs monetary policy as long as unemployment remains high and inflation low.
- Congress should manage its work on the national budget differently—economic stimulus rather than job-killing cuts.
- Congress and the president should invest in infrastructure and emerging industries.
- Congress and the president should support entrepreneurship in low-income communities.

A FAIR DEAL FOR WORKERS

- The federal government should improve the job opportunities and conditions for low-wage workers by actively enforcing the Fair Labor Standards Act and the Civil Rights Act.
- Congress should raise the minimum wage so that a full-time, year-round worker can support a family of four above the poverty line, and it should eliminate exemptions so that no worker is paid a subminimum wage.
- The president should direct government agencies to consider employee wages and working conditions as a factor in awarding federal contracts.
- Make quality child care accessible to every family in America and guarantee all workers family leave, paid sick leave, and the right to request flexible work schedules.
EXECUTIVE SUMMARY

CHAPTER 3: INCLUSION FOR THE EXCLUDED AND DENIED

• Abolish laws that prohibit ex-offenders/returning citizens from receiving public benefits that make it hard for them to get jobs and earn an honest living.

• Establish an employment program that targets individuals with significant barriers to work so that they are able to gain work experience, build skills, and improve their long-term prospects for employment.

• Guarantee every child a high-quality education from Pre-K through grade 12 and assure critical benchmarks are reached.

• Increase income assistance for people with disabilities who cannot work; provide better support to those who can and want to work.

• Improve SNAP outreach to low-income seniors; ensure that there is sufficient funding to deliver meals to all those who are homebound and in need.

CHAPTER 4: LOCAL LEADERS WORKING WITH NATIONAL PARTNERS TO END HUNGER

• Local leaders and their national partners should bring community groups together to work toward ending hunger.

• The president should convene a bipartisan White House Summit on Hunger, and Congress should reinstate the House and Senate select committees on hunger.

CHAPTER 5: ENDING EXTREME POVERTY AND HUNGER WORLDWIDE

• The international community should make a concerted push to achieve the Millennium Development Goals (MDGs) by the 2015 deadline.

• The international community must reach agreement on a set of development goals to succeed the MDGs.

• The next development goals should be for all countries, including the United States.

• The post-2015 development goals should include a stand-alone goal to end hunger by 2030 and achieve global food security and good nutrition for all.

• The next round of development goals should underscore the need to strengthen local capacity and resilience in low-income countries.
